Dortha M. Robinson

April 1, 2009

Dear Customer :

The annual required tests of backflow preventer(s) on your premises are now due. This testing is required by Plumbing Code (Section 608.18) and Utah Public Drinking water Regulations (309-102-5). The test procedure ensures the backflow preventer is operating properly and is keeping your water safe to drink.

These tests are to be performed by a Certified Backflow Technician. A list of certified testers is available at the White City Water Improvement District office.

A copy of the completed test form with the results is required by White City Water Improvement District (the water purveyor) by **May 15, 2009.**

**Remember:** A test is required at initial installation and any time a backflow preventer is repaired or replaced. This will ensure the repairs performed were effective and successful.

Thank you for your cooperation and timely response in completing this State required procedure. If you have any questions please call me at 571-3991.

Sincerely;  
Ryan Johnson  
Operations Manager
